

# IGL Gene Clonality Master Mixes

For identification of clonal immunoglobulin lambda light chain gene rearrangements.

**RUO** For RESEARCH USE ONLY. Not for use in diagnostic procedures.

Master mixes are components of complete assay/s. In general, the protocols used for all master mixes are identical, but some assays require different DNA polymerase volumes, methods of detection, and/or PCR program protocols. Therefore, it is important to refer to the specific assay product insert for the operating procedures. Product inserts are available on the web at [www.invivoscribe.com](http://www.invivoscribe.com). The product insert of interest will be found on the specific webpage of the respective assay.

This assay is based on the EuroClonality/BIOMED-2 Concerted Action BMH4-CT98-3936.
